SCT - Intermediate Skills Training
The Netherlands
1-5 March 2027

Led by Lotte Paans with Peter Slenders

Open to members who have met the learning goals for Foundation Training and want to take a next step

This intensive skill training is designed to shift focus from work with oneself to work with others. You will deepen your understanding of the 'Theory of Living Human Systems' that underpins all SCT protocols and practice. Participants receive practical, hands-on training with direct feedback, using videotaped skills practice and Force Field reviews.

Intermediate Skills Training (IST) is a 5-day training. Participation at intermediate level requires you to be a member of SCTRI and prepare your application for the program in consultation with a SCT Licensed Practitioner. IST is a useful training to take more than once.

This training has until now only been available at the SCT annual Conference (USA) and the annual SCT Training Week in York (UK). This is a unique opportunity to attend the Intermediate Skills Training in The Netherlands.

Depending on the membership, the main language will be English or Dutch. There will be room to speak Dutch while working in the task groups if so desired.
Maximum group size is 16 participants.
